

# Basis Technologies

## [ Transport Express ]

Simple, powerful Configuration Management software to reduce the cost and risk of implementing and supporting changes across your SAP® enterprise business landscape.

Transport Express goes beyond transport automation to add value where it is truly needed – in the management of changes. Advanced features such as automated reversal of changes, approval/release authorizations and controls with intelligent, useful reporting capabilities make Transport Express an important and valuable business asset.

Discover what Transport Express can do for you.

# [ Transport Express ]

## [ Why is Configuration Management software necessary? ]

In dynamic environments configuration change is ever-occurring. Existing business processes keep changing, new processes develop, old processes become redundant.

When process changes result in changes to SAP configuration and programs, do you know that they are being tracked appropriately? Does each change have appropriate documentation? Who initiated, authorized and executed the changes? Who retains final ownership to the resulting changes?

Keeping abreast of SAP software upgrades and implementations routinely present challenges. When you expect change to bring additional benefits, how do you mitigate and control risk of failure?

Transport Express provides the extra controls and accountability expected by business users, but not supported by SAP delivered tools such as TMS and CTS. Transport Express ensures that changes are adequately tested, communicated and importantly, do not cause regression.

## [ What are the benefits in using Transport Express? ]

- Enables the business to become a key participant in the configuration management process by presenting process-related content instead of underlying technical data.
- Increased control and accountability of changes through increased visibility, communication and extensive reporting.
- Reduced operational costs through transport automation, roll-back/undo features and the resulting improved communication.
- Risk reduction through the grouping of changes to related tasks and the intelligent monitoring of the dependencies between changes.

## [ Is Transport Express integrated with SAP software? ]

Transport Express is compatible with SAP R/3 release 4.x through to current releases of Web Application Server. Using a rich Windows™ user interface, Transport Express is tightly integrated with the SAP delivered correction and transport system. All Transport Express information is maintained within your SAP database - which means increased data security, without need to maintain yet another external database.

## [ Is Transport Express licensing a significant cost? ]

Client experience has typically proven a payback profile for Transport Express software inside 6 months - that's without accounting for the intangible benefits associated with accountability and smooth operations.

## [ What next? ]

Contact Basis Technologies for further information or to arrange a Transport Express demonstration.
